BIRD Control Product

As winged occupants of the environment, birds form an integral and beautiful part of our natural habitat and eco-system. However, with rapid industrialization, birds have been forced to adapt to an increasingly urbanized environment and co-exist with humans, resulting in heightened conflicts.

Bird droppings not only deface building facades and damage goods and equipment, but also carry harmful ecto-parasites. These encourage the spread of diseases that may cause respiratory problems, among other illnesses, to people living or working near nests or roosts

Green Bird Control product aims to mitigate the conflicts between man and birds without disturbing the ecological balance, by implementing humane and responsible bird control measures to alter living condition and influence bird behavior, so that we can co-exist with these creature peacefully.

Green BIRD NETTING

Green Bird Netting **HDPE**

Mesh size : Knitting net 18mm. x 18mm.

Material : HDPE + UV. Stabilized 5%
